Profile

profile.csv

Data included

Your Blogger blogs, including posts, pages, comments and videos, as well as settings and your Blogger profile.

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Blog feed

The posts, pages and comments that make up a blog. For blogs that you are an admin of, you can export all posts, pages and comments. For other blogs, you can only export the posts, pages and comments that you are

the author of.

Atom
Data from your blog(s) is in the standard ATOM format, which can be imported by most popular blogging software either directly or with the help of third-party tools.

Photos
Blogger photos contained in each album.

Original format/PNG/JPG/GIF
Photos uploaded in original quality will be provided in their original format. Photos uploaded in high quality may be returned in a different format.

Photos that have been edited are downloaded with the original file name ending with "-edited".

Album metadata
Data associated with each album, such as title or description.

JSON
Json is an open-standard file format that provides data in human readable form.

Photo metadata
Data associated with each photo, such as creation time or comments.

JSON
Json is an open-standard file format that provides data in human readable form.

Videos
Videos uploaded to a blog. For blogs that you are an admin of, you can export all videos. For other blogs, you can only export videos that you have uploaded.

Videos
Videos in the format originally uploaded

Reactions
Reactions that you have made.

CSV
Comma-separated values

Followers
Information about the followers of a blog. You can only export followers of blogs that you are an admin of.

CSV
Comma-separated values

Settings
Settings for a blog. You can only export settings for blogs that you are an admin of.

CSV
Comma-separated values

Profile
Your Blogger profile.

CSV
Comma-separated values

Reading list
Your Blogger reading list.

CSV
Comma-separated values

Theme
The theme for a blog.

XML
As it appears in blogger.com theme editor

Settings.json

Data included

Bookmarks, history, and other settings from Chrome.

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Addresses and more

Information entered into online forms, such as phone numbers, email addresses, and some physical addresses.

JSON

Bookmarks

The pages bookmarked in Chrome exported in Netscape Bookmarks File Format.

HTML

Bookmarks are viewable in any web browser and can be imported by the majority of web browsers including Firefox and Internet Explorer. Bookmarks are exported as HTML files in a standardized format used by Netscape and supported by several other browsers when importing bookmarks (Firefox, Internet Explorer, etc.).

History
The sites visited in Chrome, including web addresses entered in the address bar.

JSON

Dictionary
Words added to Chrome dictionary.

CSV
The exported CSV has a single column with one dictionary word per row. Note that if the data is encrypted the word *Encrypted* is written instead.

Extensions
Extensions installed from the Chrome Web Store.

JSON

Settings
Chrome user settings.

JSON

Reading List
Pages added to the reading list in Chrome.

HTML
Reading list pages are exported as HTML files in a standardized format used by Netscape and supported by several other browsers when importing bookmarks (Firefox, Internet Explorer, etc.).

OS Settings
ChromeOS settings. Not exported in third-party takeout.

JSON

Device Information
Information about user devices that are running a sync-enabled Chrome browser. Not exported in third-party

takeout.

JSON

Contacts

Starred in Android.vcf

The Squad

The Squad.vcf

Work

Work.vcf

Data included

Contacts and contact photos you added yourself, as well as contacts saved from your interactions in Google products like Gmail.

Folder structure

Now that you've downloaded the contacts from your Google Account, you'll find folders named "My Contacts" and "All Contacts," plus additional folders if you created any labels, or starred contacts on your Android device. The "My Contacts" folder contains only those contacts you added yourself. The "All Contacts" folder contains both contacts you added yourself as well as contact info automatically saved from your interactions in Google products, like Gmail.

How to handle this export

If you downloaded your contacts as a CSV file, you can view them in a spreadsheet, or import them to Microsoft Outlook or another Google Account. If you downloaded your contacts as a vCard file, you can import them to another Google Account, Mac OS, iOS, or other contacts services.

You're in control of your data in Contacts

Review your data

You can review contacts you've added to your Google Account in Contacts

Manage your data

You can delete contacts from your Google Account in Contacts

Control your data

Go to Gmail settings to control whether contacts are created for auto-complete.Go to your Google Account to control whether contact info is saved when you interact with people in other Google products.

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Contacts

CSV
For importing to MS Outlook or another Google Account

vCard
A common file format for electronic business cards used by programs such as Gmail, Microsoft Outlook, and Mac OS X contacts.

Avatar.png

Player.html

Data included

Data, including achievements, scores, and game activity, from games you play

Folder structure

The export contains two main folders:

- Global: information about the player
- Games: a directory containing folders for each game for which the user has data

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

avatar.png

The avatar picture used by the player.

PNG

Player Information

The player profile settings, as set in the Play Games App Settings screen.

HTML

JSON

Scores

Details of the high scores we have stored for the player/game in question.

HTML

JSON

Achievements

Details of the achievements we have stored for the player/game in question.

HTML

JSON

Quests

Details of the quests we have stored for the player/game in question.

HTML

JSON

Experience

Details of the experience point earning events we have stored for the player/game in question.

HTML

JSON

Activity

Details of the activity (e.g. first/last time played) we have stored for the player/game in question.

HTML

JSON

CoverImage

An image (usually a screenshot) generated by the game when the game was saved.

PNG/JPG

Data.bin
The actual saved game data

Original format

Metadata
Metadata associated with the saved game (date/time, description etc.).

HTML

JSON

name.bin
The actual saved game data.

Original format

Streaks
Details of streaks played in games.

HTML

JSON

Playtime
Details of time spent playing games.

File formats

Some file formats (e.g. html, png) will be viewable in your browser, and will appear as clickable links below that will open the file once you've fully extracted your archive. Other file types can be opened

by their appropriate applications by navigating through the archive's directory. You can click on any folders that may be present to see their contents.

Data that are still in the process of being deleted are not included in your archive. Learn more about your deleted data.

Failed Files

Some of the files requested for your archive failed to download. In many cases, clicking on the failed file below will take you directly to the file within its original service. Other times, this was caused by a file that was somehow corrupted (e.g. a photo that was only partially uploaded) and is not recoverable. You can retry your download here or use the link in the menu at the top of that page to send us feedback.

ApplicationPermissions.json

Automations.json

GoogleNestConnect.json

GoogleNestPartnerConnections.json

HomeApp.json

HomeHistory.json

SecurityAlarmClips.json

SoundSensing.json

Data included

Device, room, home and history information from the Home App.

Folder structure

Files containing all of the Home App data. If there are audio recordings from sound sensing enabled devices, they will be placed in a "blobs" folder.

You're in control of your data in Home App

Review your data

Review your Home App data

Manage your data

Delete your Home App data.

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Home App data
Devices, rooms, homes and automations.

JSON
"Devices" and "Rooms" are contained in "RoomsAndDevices" objects, which are contained in "FullStructure" objects.Devices not in a structure are included as "unassigned_devices".

Home history data
History of events in your home.

JSON
Events in your home are listed under "structure_history." Events about a specific device are listed under "device_history". "Timestamp" is the time of the event.

Audio recordings
Audio recordings at the time sound sensing devices detected activity.

audio/aac
Audio recordings are found in the "blobs" folder and end with the ".aac" suffix.

Security alarm clip data
List of security alarm clip data which belong to your home.

JSON
All the clip data are under an array named "securityAlarmClipData" which is contained in another array named "securityAlarmData"

Professional services data
Information about professional services (e.g. installation services) you have ordered.

JSON
"partnerName" is the name of the partner offering the professional service. "installation.location" is the location where the installation service is taking place. "installation.deviceSettings" are the default settings you have selected for the devices set up during the installation.

Scripted Automations
Automations created in the Google Home Script Editor.

JSON
"script" is the name of the script containing automations created by script editor

Platform Permission Data
Permissions you have granted to third-party applications to access your smart-home data, including automations, devices, rooms, and structures.

JSON
Phone and permission grants for third party applications. "Timestamp" is the time you granted access to the application. Grants are the specific permissions you approved.

Journal

0 files exported successfully

About this export

Exported files

File formats

No data found

Data included

Your journal entries and attachments from Journal.

Folder structure

Each folder is named by the creation time of the journal entry and contains the journal entry and its attachments.

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Entries
All content in your journal entries.

JSON
Json is an open-standard file format that provides data in human readable form.

Attachments
All journal entry attachments, such as photos, activities, and more.

Original format
Format depends on quality chosen when uploaded.

Keep

0 files exported successfully

About this export

Exported files

File formats

No data found

Data included

Notes and media attachments stored in Google Keep. More info

Folder structure

One HTML file for each note, named with either the note's title or the time it was last updated. One additional file foreach media attachment, named with the time of upload.

How to handle this export

All data can be opened by a modern web browser.

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Note content

Content of your notes, viewable in any web browser.

HTML

Note content (JSON formatted)

Content of your notes formatted in JSON, viewable in any JSON compatible text reader.

JSON

Image attachments
Photos and images attached to your notes.

Original format uploaded

Voice attachments
Voice recordings attached to your notes.

3GP, AAC, AMR

Exported files

File formats

No data found

Data included

Maps, layers, features and media stored in your My Maps.

You're in control of your data in My Maps

Review your data

View your current My Maps.View, share and manage your My Maps in Drive

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Map
The map as a KML/KMZ file.

KMZ
KMZ = Zip file containing (1) a representation of the map (doc.kml) in the KML format; (2) any icons for the point features (PNG files under the images/ directory). Photos that are attached to features will be

embedded inside the doc.kml file as URLs that are valid for 30 days; it is the user's responsibility to retrieve the photos by visiting the URLs and to protect the URLs from being shared.

Saved
3 files exported successfully

About this export

Exported files

File formats

Some file formats (e.g. html, png) will be viewable in your browser, and will appear as clickable links below that will open the file once you've fully extracted your archive. Other file types can be opened by their appropriate applications by navigating through the archive's directory. You can click on any folders that may be present to see their contents.

Data that are still in the process of being deleted are not included in your archive. Learn more about your deleted data.

Favorite images.csv

Favorite pages.csv

Favorite places.csv

Data included

Collections of saved links (images, places, web pages, etc.) from Google Search and Maps.

Folder structure

One folder with a csv per collection and an image file per image you uploaded or that was uploaded to your collection.

How to handle this export

Copy and paste URLs into any browser to view saved items.

You're in control of your data in Saved

Review your data

Review your collections of saved items.

Manage your data

Delete collections of saved items.

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Collection of saved items
Title, URL, note, and comments of the saved item

CSV
CSV contains the following fields: Title, Note, content URL, and Comment. If the collection has a description, the first line is the collection description followed by a blank line. If there are comments on the collection, they go in the Comment field after the collection description (and blank line) before the item details. If there is more than one comment per item, the other item fields (Title, Note, and URL) are repeated for each item comment.

Uploaded images
Images the user uploaded or were uploaded to their collection

IMAGE
The image is in the format that the user uploaded it. For example if the user uploaded a JPEG, the output

is a JPEG, and if they uploaded a PNG, the output is a PNG.

Search Contributions
